

NSA Tool — Data Structure Reference for Report Update

Audience: Report builder maintaining the public NSA report site (non-state-actors.paho.org/official-relations) **Purpose:** Reference for the data structure behind the report, the four SharePoint lists involved, their key columns, and how they connect. **Scope note:** This report reflects submissions once the review process has completed and activities have been extracted

1. The Four Lists

List	What it holds
NSA Profiles	One record per organization. Stable org data — the source of truth across all cycles.
NSAs	One record per Collaboration Period submission (New Application / Renewal / Progress Report cycle). The main submission record the report pulls from.
Collaboration Workplan	One row per planned activity for the 3-year workplan, linked to the parent NSAs record. Carries per-year progress-report data (Year 1/2/3 dates, results, reported flags).
Collaboration Activity	One row per activity carried out in the prior 2 years, extracted on New Application submissions.

Linking:

- `Collaboration Workplan.ParentID` and `Collaboration Activity.ParentID` → `NSAs.ID`
- Both also carry `NSAProfileID` for direct org-level joins without going through NSAs
- `NSAs.NSAProfileID` → `NSA Profiles.ID`

2. NSAs List — Key Columns

Column	Type	Notes	Report relevance
NSA_Status	Choice (3 bilingual values)	Values: New Application - Nueva Aplicación , Renewal - Renovación , Progress Report - Reporte de Progreso . Workflow sets this from TypeofSubmission at submission, then updates it to Progress Report once the record completes its review cycle.	Use this as the "Type of Submission" filter.
TypeofSubmission	Choice	Only ever New Application or Renewal — Progress Report is not a user-selectable value here.	A record showing TypeofSubmission = Renewal may currently be in NSA_Status = Progress Report because it's cycled past the renewal submission itself. Don't use this as the type filter.
GovBodies_Outcome	Choice — Approved / Not Approved / Deferred	This is a working/in-cycle field — it resets at the start of each new cycle.	Not reliable as a report filter on its own.

Column	Type	Notes	Report relevance
GovBodies_Status	Choice (mirrors GovBodies_Outcome values)	Set from GovBodies_Outcome at the point of decision, but does not reset — it persists as the durable record of the org's Governing Bodies decision.	Use this for any report filter/display needing the GB decision.
Status	Choice (11 values)	User-facing progress indicator (Draft, Submitted, Under Review, Governing Bodies Approval, Completed, etc.) tied to the internal review workflow. It cycles again once a record enters a new Progress Report / renewal round.	Not a durable "is this report-eligible" filter — see Section 5. Don't use this as the type filter.
ActivitiesExtractionCompleted	Yes/No	Flags whether activity extraction has run for the record. Durable — does not cycle.	Not part of the report eligibility filter — GovBodies_Status alone drives that (see Section 5).
CollaborationPeriod	—		No action needed.

3. NSA Profiles — Key Columns

Column	Type	Notes
<code>RenewalKey</code>	Single-line text, indexed	Holds the ID (as text) of the org's most recently extracted NSAs submission. Backend join key only — no report-facing role.
<code>NSAOrganizationType</code>	Text	Source for "Organization Type" filtering.
Org detail fields (<code>NSAObjectives</code> , <code>NSAWorkFields</code> + language variants, <code>NSAOrganizationBodies</code> + language variants, <code>NSAWebsite</code> , <code>NSAYearOfEstablishment</code>)	Text	
<code>Originator_*</code> / <code>PAHOFocalPoint_*</code> (<code>DisplayName</code> , <code>Email</code> , <code>ID</code> , <code>Comments</code> , <code>TaskOutcome</code>)	Various	

4. Collaboration Workplan & Collaboration Activity

Collaboration Workplan — one row per planned activity, columns include:

- `ParentID` (→ `NSAs.ID`), `NSAProfileID` (direct org join)
- `Year1_Date` / `Year1_Results` / `Year1_Reported` (+ `ENG/FRE/POR/SPA` result variants)
- `Year2_Date` / `Year2_Results` / `Year2_Reported` (+ language variants)
- `Year3_Date` / `Year3_Results` / `Year3_Reported` (+ language variants)
- `ResponsibleEntity`, `Duration`, `Reference`

Collaboration Activity — one row per past-2-years activity, extracted on New Application only.

5. Report Filter Guidance Summary

What the report needs	Use this
Type of submission (New / Renewal / Progress Report)	<code>NSAs.NSA_Status</code>
Organization type	<code>NSA_Profiles.NSAOrganizationType</code>
Collaboration period	<code>NSAs.CollaborationPeriod</code>
Final Governing Bodies decision	<code>NSAs.GovBodies_Status</code>
Record is fully processed / eligible for the public report	<code>NSAs.GovBodies_Status = Pending</code> OR <code>NSAs.GovBodies_Status = Approved</code>
